AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) An electronic apparatus comprising:

a holding portion which detachably holds a radio communication card including an antenna:

a metal shielding plate on which the holding portion is provided; and
a connecting portion for data communication with the radio communication card
held by the holding portion,

the holding portion being arranged to hold the radio communication card in a manner such that the antenna is located outside of the holding portion and the minimum distance between the antenna and the **metal shielding** plate is 1 mm or more.

- 2. (Previously Presented) An electronic apparatus according to claim 1, which further comprises a transmitter-receiver portion connected to the connecting portion, and configured to transmit and receive data through a public data network.
- 3. (Currently Amended) An electronic apparatus according to claim 1, wherein the holding portion is arranged to hold the radio communication card in a manner such that the minimum distance between the antenna and the **metal shielding** plate is 2 mm or more.
- 4. (Original) An electronic apparatus according to claim 1, wherein the radio communication card includes a PC card.
 - 5. (Canceled).
 - 6. (Currently Amended) An electronic apparatus comprising:

Customer No. 22,852 Application No. 09/800,889 Attorney Docket No. 04329.2524-00

an apparatus body having an installation surface and a first surface opposite to the installation surface;

a holding portion provided at the apparatus body and configured to

detachably hold a radio communication card which has a second surface and an

antenna provided on the second surface; and

a connecting portion arranged at the apparatus body, for data communication with the radio communication card held by the holding portion,

the holding portion being arranged to hold the radio communication card in a manner such that the first and second surfaces face in a same direction,

An electronic apparatus according to claim 5, wherein the holding portion includes a preventing portion which prevents the radio communication card from being set in a manner such that the first and second surfaces face in opposite directions.

- 7. (Currently Amended) An electronic apparatus according to claim [[5]] 6, which further comprises a transmitter-receiver portion connected to the connecting portion, and configured to transmit and receive data through a public data network.
- 8. (Currently Amended) An electronic apparatus according to claim [[5]] 6, wherein the radio communication card includes a PC card.
- 9. (Currently Amended) An electronic apparatus according to claim [[5]] 6, which further comprises a display element provided on the first surface of the apparatus body and capable of displaying operating states.
- 10. (Currently Amended) An electronic apparatus comprising:

 an apparatus body having an installation surface and a holding portion which
 detachably holds a radio communication card including an antenna; and

Customer No. 22,852 Application No. 09/800,889 Attorney Docket No. 04329.2524-00

a connecting portion provided at the apparatus body, for data communication with the radio communication card held by the holding portion,

the holding portion being arranged to hold the radio communication card in a manner such that the antenna is located outside of the apparatus body and situated farther from the installation surface of the apparatus body than a center of the apparatus body with respect to **the height** a direction **perpendicular to the installation surface** of the apparatus body.

- 11. (Previously Presented) An electronic apparatus according to claim 10, which further comprises a transmitter-receiver portion connected to the connecting portion and configured to transmit and receive data through a public data network.
- 12. (Original) An electronic apparatus according to claim 10, wherein the radio communication card includes a PC card.
- 13. (Currently Amended) An electronic apparatus comprising:

 an apparatus body having a holding portion which detachably holds a radio
 communication card including an antenna;

a connecting portion provided at the apparatus body, for data communication with the radio communication card held by the holding portion; and

a cover removably fitted to the apparatus body and covering at least a portion

of the radio communication card set-in-position extending outside the apparatus

body and the holding portion when the radio communication card is set in position.

14. (Original) An electronic apparatus according to claim 13, wherein the apparatus body has an installation surface and a first surface substantially parallel to the installation surface; and the holding portion has a card loading aperture opening in

Customer No. 22,852 Application No. 09/800,889 Attorney Docket No. 04329.2524-00

the first surface, and the cover is located covering the card loading aperture and the radio communication card therein.

- 15. (Original) An electronic apparatus according to claim 13, wherein the radio communication card is a PC card.
- 16. (Original) An electronic apparatus according to claim 13, wherein the cover is formed of a nonmetallic material capable of transmitting light.

Claims 17-19 (Canceled).
